

# Marks Of Pcm

- Sort the students in Ascending order of their Physics marks.
- Once this is done, sort the students having same marks in Physics in the descending order of their Chemistry marks.
- Once this is also done, sort the students having same marks in Physics and Chemistry in the ascending order of their Maths marks.

## Search A 2d Matrix

matrix has the following properties:

- a). Integers in each row are sorted from left to right.
- b). The first integer of each row is greater than the last integer of the previous row.

- (i) find potential row, using binary search.  $\rightarrow \log N$
- (ii) now find ele in potential row using binary search.  $\rightarrow \log M$

## 240. Search a 2D Matrix II

38

Write an efficient algorithm that searches for a `target` value in an `m x n` integer `matrix`. The `matrix` has the following properties:

- Integers in each row are sorted in ascending from left to right.
- Integers in each column are sorted in ascending from top to bottom.

linear  $\rightarrow$   $m+n$

$i, j$

Given a **sorted** integer array `arr`, two integers `k` and `x`, return the `k` closest integers to `x` in the array. The result should also be sorted in ascending order.

An integer `a` is closer to `x` than an integer `b` if:

✓  $|a - x| < |b - x|$ , or

✓  $|a - x| == |b - x|$  and  $a < b$

$$x = 1$$

$$a = 2$$

$$b = 3$$

→ a because  $|a - x| < |b - x|$

$$x = 2$$

$$a = 1 \quad b = 3$$

→ a,  $|a - x| = |b - x|$

## Maximize Sum Of $\text{arr}[i] * i$ Of An Array

1. Given an array `arr` of  $N$  integers.
2. Your task is to write a program to find the maximum value of sum of  $\text{arr}[i] * i$ , where  $i = 0, 1, 2, \dots, n-1$ .
3. You are allowed to rearrange the elements of the array.

|   |   |   |   |   |
|---|---|---|---|---|
| a | b | c | d | e |
| 0 | 1 | 2 | 3 | 4 |

total possibilities :  $5!$

sorted array is the best  
possibility

$$\sum_{i=0}^{n-1} \text{arr}[i] * i$$

## Max Sum In The Configuration

● Medium

< Prev

Next >

1. Given an array, you have to find the max sum of  $i \cdot A[i]$  where  $A[i]$  is the element at index  $i$  in the array.
2. The only operation allowed is to rotate (clock-wise or counter clock-wise) the array any number of times.

maximise  $\sum_{i=0}^{n-1} arr[i] \times i$

configurations  $\rightarrow n$

$$\rightarrow 0a + 1b + 2c + 3d$$

$S_i$

$$\rightarrow 0d + 1a + 2b + 3c$$

$S_{i+1}$

$$\rightarrow 0c + 1d + 2a + 3b$$

$$\rightarrow 0b + 1c + 2d + 3a$$

$$S_{i+1} = S_i + \text{sum} - n * \text{arr}[n-i-1]$$

|   |   |   |   |
|---|---|---|---|
| a | b | c | d |
| 0 | 1 | 2 | 3 |
| i |   |   |   |

$$S_0 = 0a + 1b + 2c + 3d$$

$$S_1 = 0a + 1b + 2c + 3d + (a + b + c + d) - 4 * d$$

$$= 0d + 1a + 2b + 3c$$

$$S_2 = 0d + 1a + 2b + 3c + (a + b + c + d) - 4 * c$$

$$= 0c + 1d + 2a + 3b$$
